

TATTOO AFTERCARE

Remove bandage in 4-12 hours. Wash tattoo gently with mild soap and warm water, pat dry with a paper towel. Do not rebandage.

Apply a light coat of unscented ointment or lotion such as Aveeno or Aquaphor 3-4 times a day for 2 weeks.

The tattoo will start to peel usually after the 4th or 5th day, this is normal. Do not pick or scratch the tattoo. Continue using ointment or lotion for 2 weeks.

Avoid soaking in swimming pools, hot tubs, saltwater and direct sunlight for at least 2 weeks.

Tattoos are very sensitive to sunlight, therefore it is very important to keep the tattoo out of the sun as much as possible. If the healed tattoo is going to be exposed to the sun, sunscreen must be applied.

We have given you the very best in art, the very best in color and the tattoo was applied expertly under the most sterile conditions. When you took it with you it was treated and covered with a sterile dressing. The tattoo was accompanied with a full set of instructions for its treatment. You are responsible for its care in the next 2 weeks. It's easy, treat yourself right!

Thank you for your patronage.
