

HOW TO CARE FOR YOUR HANDMADE STONEWARE POTTERY

- All functional wares will last longer if hand washed, but they are dishwasher safe.
- All functional wares are oven-safe and microwave-safe. When heating food or baking in the oven, do not place the piece in a pre-heated oven. Place the piece containing the food in a cold oven first, and then bring the oven up to the desired temperature. This will avoid temperature shock, which could cause the piece to crack. When removing the piece from a hot oven, set it down gently.
- All functional wares are stoneware, not flameware. Do not place on open flame. If using stovetop coils place the piece on cold coils then slowly bring to temperature. Thermal shock can crack the wares.
- All stoneware pottery can crack if banged against another hard object or dropped on a hard surface.
