BODIES, curated by instructor Megan Euker, highlights the medical device design work of SAIC's *Intro to Designed Objects* students. Using the collections at the IMSS for inspiration, students identified medical or bodily constraints that could be alleviated through a specifically designed assistive device. Through a process of in-depth research and prototype testing, they created designs intended to increase accessibility, promote healthy behaviors, create comfort and improve safety. **Read more about the exhibit at imss.org**

This program is partially supported by a grant from the Illinois Arts Council Agency.

*This project is partially supported by a City Arts Grant from the City of Chicago
Department of Cultural Affairs & Special Events.*
