

Collage on Steel

In this online class you will learn about enameling on steel, liquid enamel and collaging with decals. We will be working on 4" steel tiles and a kiln is required for this.

This is an ongoing class. After registering you will one month to complete the class and you will receive a general supply list with links to specific products needed for class. Depending on what you have of course the materials fee shouldn't be above \$150.

If you have taken any of my online classes before you know I am available 24/7 for questions or comments for the duration of the class. My online classes are work at your own pace. I have had many requests for this due to the difficulty of

traveling, scheduling and even cost for traditional instruction and previous classes have brought together hundreds of students from across the world.

I use many detailed photos in the format of photo albums to show you my techniques step by step. (If you are someone who loves hours of videos, this is not the class for you.)

Among the many topics I will cover:

- Steel preparation
- Liquid enamel prep and application
- Firing
- Layering techniques with the decals and more.

We can also experiment during class with mixing the liquid enamels with other enamel products. This will allow you to use many of the enamel products that you might have lying around. You can also purchase a full sheet of black decals from me (\$30 and S+H) if you want to use these in your collage work. You can also use sepia decals if you have knowledge of this technique.

The Collage on Steel class cost is \$190 via Paypal.

You need to have knowledge about decal transfer and have basic enameling skills. I'm offering a special if you need the decal class. It will be \$90 for the decal class if you are going to sign up at the same time as the Collage on Steel class (total cost for both classes is \$280).

Upon registration you will be entered into a private Facebook group on with the other students and we all work together in a virtual classroom. We share comments, questions and our work.
